

SLIP2000™

EWL

**EXTREME
WEAPONS
LUBRICANT**

DESIGNED FOR USE ON CHAIN GUNS, MACHINE GUNS, CREW SERVED WEAPONS AND WEAPON SYSTEMS

DESCRIPTION

Slip 2000 EWL has an extremely high (EP/AW) anti-wear properties. It has been increased from the 750lbs. with our regular gun lube to 4500lbs. This means EWL will last 2-5 times longer. Testing shows that with continued applications of EWL, weapons have been fired 50,000+ rounds with no cleaning and no malfunctions.

Slip 2000 EWL is a pure synthetic liquid lubricant. Formulated without the use of mineral oil, petroleum distillates, Teflon or silicone. EWL withstands extreme temperature changes (-100°F to +1250°F). It also combines three essential functions (lubricant, cleaner, preservative) into a single product.

Slip 2000 EWL will not separate, in fact you do not have to shake it. It will not dry out or evaporate off and it will not become sticky or leave behind a tacky residue. Unlike petroleum products, Slip 2000 EWL will not attract and hold firing residue, dust, sand or dirt particles.

It's unique formulation penetrates into the smallest and tightest areas that oils will not go. It will penetrate the micro-pores of the steel and bond with the metal providing a long lasting protective barrier that reduces friction, heat and wear. This protective barrier helps keep lead, carbon, copper and plastic from sticking and building up. Ultimately reducing your cleanup time and keeps all guns operating much smoother for much longer.

ENVIRONMENTALLY SAFE - USER FRIENDLY

Slip 2000 EWL is a GREEN product and was developed with your health, safety and the environment in mind. It is a Biodegradable, Non-Toxic and Non-Hazardous product built from a renewable source. It is also a non-regulated product.

LUBRICATES

Slip 2000 EWL has incorporated advanced technology additives to enhance film strength and anti-wear properties. It penetrates the micro-pores and bonds to the surface of the metal. Even when the surface is wiped dry to the touch Slip 2000 EWL is still present and lubricating from within the pores of the metal. Slip 2000 EWL will OUTLAST any extreme weapons lubricants on the market and we have done this without adding any oils, petroleum distillates, silicones or PTFE.

**BIODEGRADABLE • USER FRIENDLY
NON-REGULATED
NON-TOXIC • NON-HAZARDOUS**

CLEANS

Slip 2000 EWL will aid in the effective removal of built up carbon, lead, copper, corrosive residue and firing residues that can build up and become abrasive to both recoil and gas operated mechanisms. Slip 2000 EWL gets into those hard-to-reach areas and penetrates deep down under copper, lead and plastic wad fouling, other oils, trapped dirt, grit and grime and helps float them away while dissolving built up carbon.

PRESERVES

A micro thin film of our enhanced preservative immediately bonds itself and forms a barrier that displaces moisture and provides excellent corrosion and rust protection. Slip 2000 EWL has passed the Salt Spray Corrosion (ASTM B-117) 150 Hour Test.

SIMPLE TO USE

For best long-term results, apply Slip 2000 EWL to a clean surface and allow to penetrate. Apply to all moving parts that require lubrication and/or protection from corrosion. Apply to inside of bores, barrels, chambers, firing pins, ejectors and trigger mechanisms. Slip 2000 EWL will penetrate and free gummed up and sticky parts. EWL will penetrate into areas where oils do not go, break up and purge out old dried-up oils, carbon, dirt and debris. Slip 2000 EWL can be used as a cleaner on your next cleaning. (For excessively dirty or neglected parts, Slip 2000 725 or Carbon Killer should be used for cleaning.)

EWL

EXTREME WEAPONS LUBRICANT

PROVEN TO WORK IN ALL CONDITIONS

You can not always control the conditions you have to shoot in but you can control how well your weapons perform in those conditions!

Don't let dust, moisture, cold weather, heat or carbon buildup interfere with your guns ability to perform.

SAND, DUST AND DIRT

Slip 2000 Gun Lubricant is a pure synthetic blend of the highest quality. It does not attract dust, dirt or sand like petroleum based products. Even in extremely dusty conditions your gun will function properly.

WET AND HUMID

It is excellent at displacing moisture. This will help prevent corrosion in wet or humid conditions including exposure in coastal and tropical elements.

EXTREME HEAT AND COLD

Slip 2000 EWL has a temperature range of -100 degrees F to a +1250 degrees F so it will not freeze, become sticky or tacky or slow down in cold weather. It will not evaporate in hot weather or burn off during repeat firing. This temperature range will help prevent jamming, freezing and misfires you would othwise encounter with a lesser lubricant.

FOULING BUILD UP

Slip 2000 EWL will penetrate the micro-pores of a metal surface and actually bond itself to your gun. This protective barrier will prevent carbon, lead, copper, plastic and other foulings from building up.

Ultimately this means you can fire more rounds, regardless of your shooting environment, before you will need to clean or re-lube.

**Extreme Conditions Require
An Extreme Lubricant.
That's Why We Developed
Slip 2000 EWL.**

3000 ROUNDS OR MORE

With a single application of Slip 2000 EWL you are able to fire 3000 or more rounds before any lubrication or cleaning is needed. We do not recommend this as a normal routine but if you had to, if your life depended on it, at least you know you could.

FOR USE ON

Slip 2000 EWL excels on semi and fully-automatic weapons including the M4, M16, AR10, AR15, MP5, M60 MG, 50 Cal, 240/249 SAW's, SCAR, as well as Rocket pods and Mortar 81mm launchers, 40mm HV, MK19, H&K 40mm GMG or other automatic grenade launchers. From a 9mm pistol you carry as a side arm to a fully automatic chain gun, to Cannons and Howitzers, Slip 2000 EWL has you covered.
